PROBLEM STATEMENT 2

Title - Automating AICTE approval process using a Single Comprehensive Mobile Application

Problem Statement Bucket - Smart Education

Objective - To develop a mobile application which uses modern technology to automate the AICTE approval process for schemes, training, VC, Fellowship and office work automation and meetings to be integrated within the app are some of the basic requirements.

Background - Every year AICTE processes more than 6 crore documents of various applications/requests made to AICTE. It also does tasks like approval of grants, fellowships, schemes, and lots of office work is required which is done manually. With the queue increasing day by day, we need to automate the approval process, schemes, training, VC, Fellowship, office work of transferring the docs, meetings with appropriate futuristic technology in a single mobile application. Addressing this problem will give AICTE automation for tasks like transferring files from one department to another, approval of grants, fellowships, schemes, and lots of office work. This reduces the time for completion of the process done internally and also it enables smooth execution of the work.
The list of things that can be automated is huge and with modern technology can be explored and innovated.
