PROBLEM STATEMENT-3

Title: Decentralized Web application development

A web-based application using Blockchain technology is sought from Airport Licensing to retrieve important and relevant Project Related information from a pool of data source i.e. SAP, E-mail, E-office, Scan documents, and Database.

Objectives :

1. A software application for Concerned Officers to upload relevant data related to Airport Licensing from Airports.
2. The seamless Approval process, Centralized Monitoring and Suggestion Mechanism.
3. Relevant information should be fetched from the data source, linked to a particular project which can be used in the hour of need.

Category: Software
Domain: Knowledge Management System
Technology Bucket :
- Web
- Blockchain.
